# FilmMaker™ HotFolders

FilmMaker™ RIP HotFolders Setup.

This bulletin describes the procedure for the HotFolders setup in FilmMaker™ Rip Software.

A HotFolder allows everyone in the network to save a file in a specific folder and then have this file printed through FilmMaker ™ RIP.
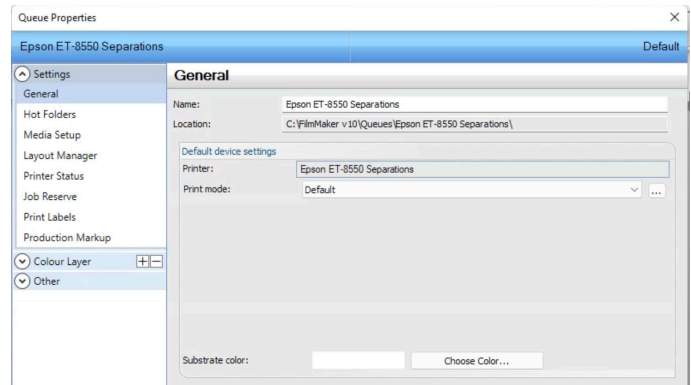

1. In your computer, create a Folder that will be used as a HotFolder in the FilmMaker™ RIP Software.

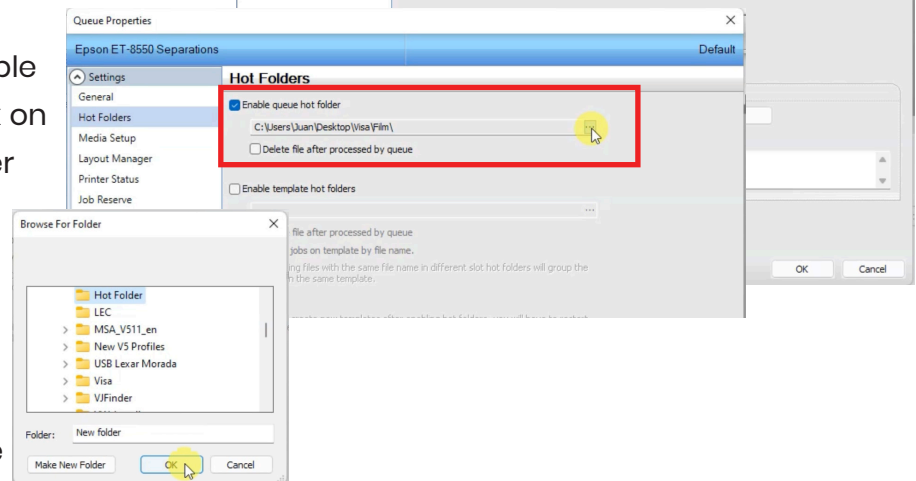

2. In your FilmMaker™ RIP, go to the **Queue Menu** and select **Properties**.
3. On the **Queue Properties** window, select **Hot Folders**.

In the **Hot Folders** section, enable the **Queue Hot Folder** and click on the three dots next to the folder name.

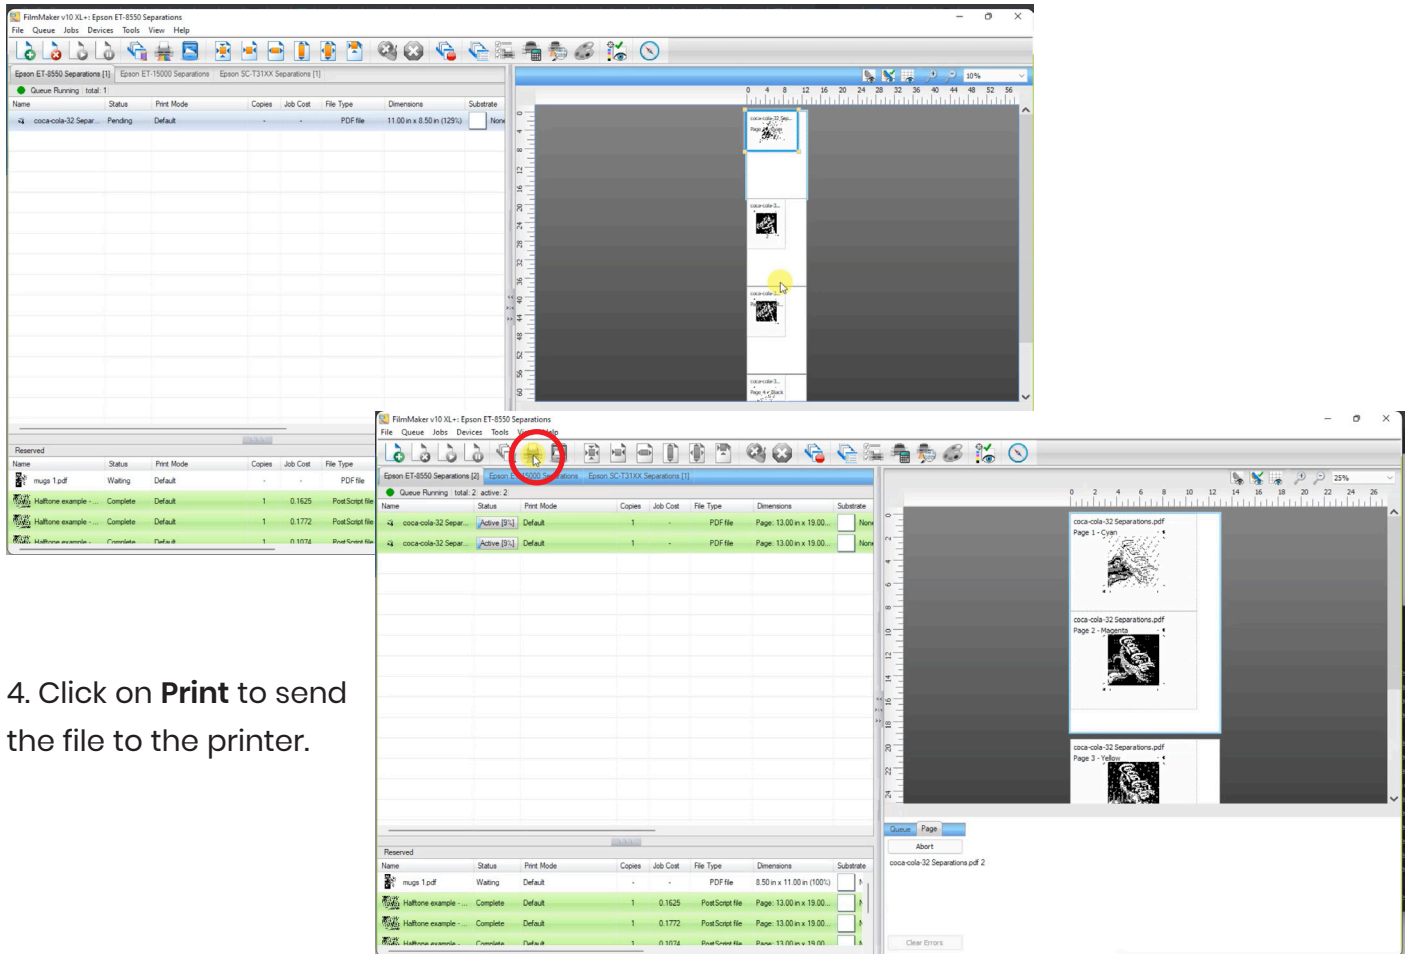

Select the pre-defined Hot Folder that will be used to save the files.

The files saved in the Hot Folder will automatically open in the FilMaker™ RIP.

Call Us at: (408) 394-7595 • www.inkjetbiz.com

4. Click on **Print** to send the file to the printer.
